Sitting Cross Legged.

women who travel in the trains and

habit is responsible for many ills, ac-

cian. The prime objection against this

habit, he says, is that the return flow

veins in the leg swell up. All the

weight is thrown on one side of the

body, and the under leg goes to sleep

owing to the pressure put on the sci-

atic nerve. The body should be equal-

ly balanced. Then there is another

danger. Too much crossing of the legs

is sure to bring lopsidedness. Let the

street cars sit cross legged, and this

WIRELESS WAVES.

Puzzling Problems With Which Scientists Have to Contend.

What we don't know about wireless telegraphy is still by far the larger part of that science. Practical efforts to use this means of communication are constantly hampered by difficulties that cannot be overcome or only partially overcome by clumsy makesbifts because they are not understood.

due undoubtedly to lightning, but they are continuously rolling in on antennae properly tuned when there is no thunderstorm within thousands of miles. It has been suggested that they are of extra terrestrial origin, perhaps the result of electrical disturbances in the sun. Some ingenious speculators have even attributed them to the Martians anything cutting through the air at a

But the fact is that we don't know where they come from or how they are generated. They manifest themselves On Thursday evening a large num- in the shape of troublesome noises in the telephone receivers at wireless telegraph stations. Another puzzling question, perhaps of more practical the action of the weather on his trains | cording to a prominent London physiof waves. When these signals have long distances to travel the weather often plays havoc with them in ways of blood from the leg is stopped at in the daytime and at night is another practical problem still awaiting definite solution.-New York Post.
